Wordpress custom login url

Do you want to add a custom login URL in WordPress? Adding a custom login URL in WordPress can help improve your WordPress security and offer your visitors a better experience. In this article, we'll show you how to add a custom login URL in WordPress, step by step. Why Add a Custom Login URL in WordPress? WordPress is the most popular CMS platform and powers over 40% of websites. Because it's so popular, it's often a target of hackers who use techniques like brute force attacks to try to log in to your dashboard. Bots and hackers trying to get into your site know the common login URLs like wp-admin and wp-login and will try to get access to your site using these URLs first. By changing the WordPress login page URL, you improve your site's security and make it more difficult for hackers to get access to your WordPress website. Another reason to add a custom login link in WordPress is to offer a better user experience. You can customize the URL and design of your login page so it matches your branding and existing WordPress theme. With that said, let's show you how to add a custom login URL in WordPress in just a few simple steps. Video Tutorial If you'd prefer written instructions, just keep reading. How to Add a Custom Login URL in WordPress Using SeedProd The simplest way to add a custom login URL in WordPress is by using a WordPress plugin. This lets you simply change your WordPress login URL without editing any core WordPress files. We recommend using the SeedProd plugin. It's the best drag and drop WordPress page builder used by over 1 million sites. With this plugin, you can easily customize your SeedProd login page and change the URL. The first thing you need to do is install and activate the plugin. For more details, see our step by step guide on how to install a WordPress plugin. Note: There is a free version of SeedProd, but we'll be using the premium version for this tutorial since it has the login page templates we need. Upon activation, first you'll need to go to SeedProd » Settings and enter your product license key. You can find your product license key under your account information on the SeedProd website. After that, navigate to SeedProd » Pages and click the 'Set up a Login Page' button. Then, you'll be taken to a screen that has all of the login page templates. You can choose one of the pre-made professional templates or select the 'Blank' template to build a login page from scratch. For this tutorial, we'll choose the 'Geo Login Page' template. Simply hover over the template you want to use and click the check icon. This brings up a popup where you can name your new login page and enter a custom login page URL. Next, click the 'Save and Start Editing the Page' button. This will take you to the page editor screen. You can customize every element of the page with the drag and drop builder. The left side has blocks and sections you can add to the page, and the right side shows a real time preview of what it looks like. When you click on any page element, it will bring up a menu to customize it further. You can customize your login page as much as you want, but we'll leave the default settings for this tutorial. For more details on all the customization options, see our ultimate guide on how to create a custom WordPress login page. Next, you need to click the arrow next to the 'Save' box and select 'Publish' from the drop down. Now, it's time to change the default login URL to your new login page. First, click the 'Page Settings' menu option at the top of the page. Then, scroll down the page until you see the 'Redirect the Default Login Page' option. Simply click the 'Enable' toggle, and you'll see it turn orange. This will redirect the default WordPress login page to the new page you just created. Don't forget to click the 'Save' button again to make sure all of your changes are now live. Change WordPress Login Page URL with a Free Plugin We recommend using the SeedProd plugin above because it also lets you easily customize your login page to match the design of your site. However, some users will want to keep the default WordPress login page and only change the login page URL. To do this, you can use the free plugin called WPS Hide Login. This plugin lets you simply change the login URL without customizing the page. Once the plugin is installed and activated, navigate to Settings » WPS Hide Login. Then, add your new login page URL in the 'Login url' box. You can also add a redirect URL in the 'Redirection url' box. This will redirect people to another page on your WordPress blog when they try to access the default wp-login.php page, and they aren't logged in. After that, click 'Save Changes'. Now, all visitors will automatically be sent to your new login page URL. We hope this article helped you learn how to add a custom login URL in WordPress. Spittaman Safobox Fewer than 10 active installations Tested with 5.0.16 Updated 3 years ago Free and easy way to customize your wp login Effin Studios Fewer than 10 active installations Tested with 5.6.8 Updated 1 year ago Change wp-admin login is a light plugin that allows you easily and safely to change wp-admin to anything you want. It does not rename or change files in core. It simply intercepts page requests and works on any WordPress website. After you activate this plugin the wp-admin directory and wp-login.php page will become unavailable, so you should bookmark or remember the url. Disable this plugin brings your site back exactly to the state it was before. Go under Settings and then click on "Permalinks" and change your URL under "Change wp-admin login". Example: . New Feature Add redirect custom field: When someone tries to access the wp-login.php page or the wp-admin directory while not logged in will be redirect to the page that you defined on the redirect custom field. If you leave the redirect field empty the plugin will add a redirect to the homepage. How to use the plugin Step 1: Add new login URL Step 2: Add redirect URL Go to Plugins > Add New. Search for Change wp-admin login. Download and activate it. Go under Settings and then click on "Permalinks" and change your URL under "Change wp-admin login" You can change this anytime, just go back to Settings > Permalinks > Change wp-admin login. In case you forgot the login URL or for any other reason you can't login on the website you will need to delete the plugin via SFT/FTP or cPanel on your hosting. Path for the plugin folder: /wp-content/plugins/change-wp-admin-login Advanced users: Go to your MySQL database and look for the value of rwl page in the options table Advanced users (multisite): Go to your MySQL database and look for rwl page option will be in the sitemeta table or options table. You need to select the option NO "Use a subdirectory for the default language". Yes, it works but not tested with the URL option "The language is set from different domains". Yes, it does work. You should setup the login URL in each website (Settings->Permalinks) Yes, it does work. You should setup the login URL in each website (Settings->Permalinks) No, Buddyboss has their own wp-admin redirect functions. No, BuddyPress has their own wp-admin redirect functions. It is very useful and functional. It allows you to increase security in a very simple way. The developer will respond quickly to give help if needed. Excellent plugin! We have several websites, which all use Wordpress and I am constantly getting notifications from Wordfence about admin login attempts. The 'Change wp-admin login' plugin is easy to use and I have installed it on our Wordpress websites. Like I said, this should have always been part of the Wordpress Core. Thankfully WP is full of great plugin developers! Nice one! Clean, simple, super lightweight! 5 Stars nothing less! WOW! Took literally less than a minute to install, activate and set up. Absolutely NO incompatibilities with the popular Enfold Theme. THANKS SO MUCH. Great plugin. Took seconds to install, use and now the login spam has ceased. Thanks to the plugin. Hi! This is an awesome lightweight plugin, but it would be even better to allow the admin to choose where to redirect the users to, if they hit the wrong URL. It's now fixed to the homepage. Thanks and congratz!! Read all 16 reviews Add automatic redirect for when someone tries to access the wp-login.php page or the wp-admin directory while not logged in will be redirected to the website homepage. Add redirect custom field. When someone tries to access the wp-login.php page or the wp-admin directory while not logged in will be redirect to the page that you defined on the redirect custom field. Add redirect custom field. Better instructions in how to use the redirect field add site URL before the new redirect input field
